

Claim Migration Lab Student Handout

TOK Cognitive Science Activity Bank • Cross-AOK • 35-45 min

Category	Cross-AOK	Time	35-45 min
Difficulty	Medium	ID	claim-migration-lab

Big idea: A claim can change meaning and justification when it migrates between knowledge contexts.

Student-Facing Prompt

Inspect Claim Migration Lab Stimulus A. Record one first claim, the evidence you used, your confidence, and what would make you revise.

Concrete Stimulus Packet

Claim Migration Lab Stimulus A	Student-facing stimulus 1: Claim: 'This pattern is meaningful' in mathematics, natural sciences, arts, and history. Name the AOK, the method being used, and the standard of evidence you would apply.	Students inspect this exact card first and commit to a claim before hearing anyone else.
Claim Migration Lab Stimulus B	Student-facing stimulus 2: Claim: 'This explanation is reliable' in human sciences, history, and technology. Name the AOK, the method being used, and the standard of evidence you would apply.	Use this for comparison, a second round, or a partner challenge.
Claim Migration Lab Reveal / Twist	Student-facing stimulus 3: Claim: 'This explanation is reliable' in human sciences, history, and technology. Name the AOK, the method being used, and the standard of evidence you would apply.	Teacher reveal: connect the changed response to the big idea — A claim can change meaning and justification when it migrates between knowledge contexts.

Actual Lesson Questions

#	Question for students
1	After inspecting Claim Migration Lab Stimulus A, what is your first knowledge claim?
2	Which exact detail from Claim Migration Lab Stimulus A did you use as evidence?
3	What did you infer beyond the evidence?
4	How confident are you: 50%, 60%, 70%, 80%, 90%, or 100%?
5	What missing information would most improve the knowledge claim?
6	What changes when a claim moves between AOKs?

Ready-to-Use Examples

- Claim: 'This pattern is meaningful' in mathematics, natural sciences, arts, and history.
- Claim: 'This explanation is reliable' in human sciences, history, and technology.

Student Task

Use the stimulus cards to complete the observation/inference/evidence/confidence grid, then answer one TOK knowledge question connected to Cross-AOK.

Activity Steps

1. Choose one broad claim and place it in one AOK context.
2. Students identify what evidence would justify the claim there.
3. Move the same wording to a second and third AOK context.
4. Groups revise the claim so it fits each new context responsibly.
5. Debrief why claims cannot always travel unchanged.

Observation and Evidence Record

Use this grid to keep observation, inference, evidence, and confidence separate.

What I noticed	What I inferred	Evidence	Confidence

TOK Debrief

- Knowledge question: What changes when a claim moves between AOKs?
- Are words like evidence, explanation, and reliability stable across knowledge contexts?
- How can interdisciplinary work avoid flattening differences?

Knowledge Questions

- What changes when a claim moves between AOKs?
- Are standards of evidence stable across contexts?
- How should claims be translated across knowledge communities?

Transfer Example

For example, run this activity with a claim moves from lab report to headline to social post to classroom discussion. Have students commit to an initial claim, then reveal the change, hidden rule, alternative context, or comparison that makes the knowledge problem visible.

Exit Ticket

- One thing I first treated as evidence was...
- My confidence changed because...
- A better knowledge question I can now ask is...
